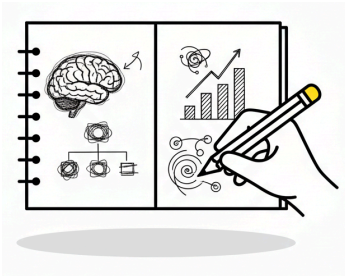
# GED Study & Exam Tips

Preparing for the GED doesn't have to be overwhelming. Success comes down to active engagement and employing clever techniques that work with your brain, not against it.



## Sketch everything

Diagrams, arrows, mini charts.
Your brain loves visuals. Half the confusion disappears the moment you put pen to paper.

## Talk back to reading passages

Ask the text What's your point and why should I care.
This keeps your brain switched on and makes every question easier.

## Warm up your brain like an athlete

Two minutes of logic puzzles or quick mental math wakes up your focus so you hit your study session at full speed.

## Use the essay as your flex zone

Walk in with a ready made structure, plug in the evidence, and let confidence do the rest.

## Attack charts like a codebreaker

Before even touching the question, figure out what the graph is trying to shout at you. The answer often reveals itself
